

PhD in INGEGNERIA DEI MATERIALI / MATERIALS ENGINEERING - 39th cycle

THEMATIC Research Field: ELECTRODEPOSITION OF FUNCTIONAL METALLIC LAYERS

Monthly net income of PhDscholarship (max 36 months)

€ 1400.0

In case of a change of the welfare rates during the three-year period, the amount could be modified.

Context of the research activity

Motivation and objectives of the research in this field

The scope of the work is the development of new materials and electrolytes for the deposition of composite coatings in the surface finishing sector. The outcomes of the proposed research aimed to produce composite coatings as alternative to hard chromium plating.

Methods and techniques that will be developed and used to carry out the research

The research activities will include the evaluation of new materials and electrolytes for the electroplating of composite coatings. The use of electrochemical techniques and structural/morphological analyses will be part of the activities for the evaluation of the layers. This scenario motivates doctoral multidisciplinary research in the field of energy storage. The proposed research will gain from knowledge coming from various disciplines, from material science to chemistry, from electrochemical processes to energy management, answering to the needs of innovation and new expertise and skills for the surface finishing sector.

Educational objectives

The educational aims are:

1. amplify supported PhD research experience and favour co-operative research experience at possible partners;
2. elevate the educational experience by creating a highly-visible center for surface finishing technology.

Job opportunities

The introduction of new materials, electrolytes and
