

PhD in CHIMICA INDUSTRIALE E INGEGNERIA CHIMICA / INDUSTRIAL CHEMISTRY AND CHEMICAL ENGINEERING - 38th cycle

THEMATIC Research Field: INTEGRATED AND CONTINUOUS SYNTHESIS AND
PURIFICATION OF CHEMICALS

Monthly net income of PhDscholarship (max 36 months)

€ 1325.0

In case of a change of the welfare rates during the three-year period, the amount could be modified.

Context of the research activity

Motivation and objectives of the research in this field

The project focuses on **engineering a platform for the continuous synthesis and purification** of added-value products such as pharmaceuticals, agrochemicals, and biofuels. It will involve the integration of flow chemistry with continuous multi-column preparative chromatography. The PhD project has received **European funding** and is part of the **EU Green Deal** objectives. This project (*Green Pharmaceuticals*) intends to design new catalytic processes and countercurrent purifications for the manufacturing of small molecules under continuous and circular conditions. The new group member is expected to have a solid background in chemical engineering in its broadest definition (chemical reaction engineering, chemical plants, purification methods). This is an **experimental project**.

Methods and techniques that will be developed and used to carry out the research

The PhD candidate will develop and use:

- Research methods in catalyst synthesis, catalyst characterization, microkinetic, catalyst evaluation, chromatography principles and applications and countercurrent separation processes.
- Writing skills.Soft skills (presentations to scientific conferences and symposia)

Educational objectives	The PhD candidate will acquire a broad knowledge of modern chemical engineering methods. It is expected that the candidate remains active in the scientific fields through publications as first author, and participation to conferences. The duration of the PhD fellowships is for 3 years. Several exchange periods abroad (Max Planck Institute, ETH Zurich, EPFL Lausanne, and University of Cambridge) or in industry (Idorsia Pharmaceuticals, Dompè, VITO, ENI, or C2Cat) are part of the fellowships.
Job opportunities	Job opportunities within the chemical and pharmaceutical sectors, such as: <ul style="list-style-type: none"> - lab head and research scientist/research director; - process manager; - project leaders; - technology consultant.
Composition of the research group	1 Full Professors 0 Associated Professors 3 Assistant Professors 2 PhD Students
Name of the research directors	Prof. Gianvito Vilé

Contacts
Telephone: +39 02 2399 3036 Email: gianvito.vile@polimi.it Website: vile-researchgroup.com T he project will involve co-supervision with: Prof. Massimo Morbidelli, a pioneer in continuous chromatography, and Prof. Mattia Sponchioni

Additional support - Financial aid per PhD student per year (gross amount)	
Housing - Foreign Students	--
Housing - Out-of-town residents (more than 80Km out of Milano)	--

Scholarship Increase for a period abroad	
Amount monthly	662.5 €
By number of months	6

Additional information: educational activity, teaching assistantship, computer availability, desk availability, any other information

The student will receive additional funding for:

- **Educational activities** (for participation in courses, summer schools, workshops and conferences)
- **Teaching assistantship** (in recognition of supporting teaching activities by the PhD student)
- **Scientific accomplishments** (in the form of a bonus, based on the results and number of high-impact publications)
