PhD School - Politecnico di Milano

Regulations of the PhD Programme in:

Structural, Seismic and Geotechnical Engineering

Cycle XXXVIII
1. General Information

PhD School - Politecnico di Milano

PhD Programme: Structural, Seismic and Geotechnical Engineering

Course start: November 2022

Location of the PhD Programme: Milano Leonardo

Promoter Department: Department of Civil and Environmental Engineering

Scientific Disciplinary Sectors:
- ICAR/07 – Geotechnics
- ICAR/08 – Structural Mechanics
- ICAR/09 – Structural Engineering

PhD School Website: [http://www.polimi.it/phd](http://www.polimi.it/phd)
PhD Programme Website: [http://www.dica.polimi.it/en/dottorato](http://www.dica.polimi.it/en/dottorato)

2. General presentation

Structural, Seismic and Geotechnical Engineering (SSGE) encompasses those disciplines and techniques that allow to understand, model and control the behaviour of structural materials, soils, components and buildings and their interaction with the environment. This is a highly inter-disciplinary field, deeply rooted in the field of Civil Engineering, but with important industrial applications as well: the theoretical and applied study of materials and structures goes along with the analysis of the interaction of the structure with the environment, ensuing from either natural or anthropic activities. Because of their generality, the methods developed within the domain of SSGE are fundamental also in other technical-scientific areas, whenever understanding and controlling mechanical aspects is necessary to guarantee both design reliability and structural safety, serviceability as well as durability.

The PhD course is run by a Coordinator and a Faculty Board. The Coordinator chairs the Faculty Board, coordinates the preparation of the annual Educational Programme and organises the general educational activities of the PhD course (see Attachment A1). The Faculty Board is responsible for the Educational programme and for teaching and administrative activities related to the PhD course (see Attachment A2).

3. Objectives

Within the context outlined above, the primary objective of this PhD programme is to improve the advancement of knowledge with reference to: (a) innovation in materials and structures and in the methods for the mathematical modelling of their response; (b) safety of structures and infrastructures under the design and extreme static or dynamic actions or against the deterioration due to the structure
lifecycle and development of simulation methods for the analysis of their response; (c) geomaterials, soil-structure-groundwater interaction and underground structure stability.

This objective is pursued within the framework of the research activities carried out at the Department of Civil and Environmental Engineering of Politecnico di Milano. For this purpose, PhD candidates are given advanced, research-oriented training, based on the pivotal role of Structural Engineering and on the multi-disciplinary nature of Seismic and Geotechnical Engineering. More specifically, the 3-year curriculum of the PhD programme in Structural, Seismic and Geotechnical Engineering aims at providing the following professional skills that will be developed to a greater or lesser extent according to the interests of the candidate:

(a) Basic and operative knowledge of the main, up-to-date methods used in computational mechanics, in order to model and analyse the elastic, inelastic and cyclic behaviour of materials and structures;

(b) Critical understanding and conscious use of numerical codes, depending on the level of the analysis (micro-, meso- and macro-structural levels);

(c) Basic and operative knowledge of experimental mechanics, including the most advanced experimental techniques and their instrumentation, in order to test materials, structures and soil, either in a laboratory or on site;

(d) Knowledge of the most common procedures for test-based identification of parameters characterizing the mechanical properties of materials and for the identification of structural damage (for the assessment of structural safety);

(e) Basic and operative knowledge of the design criteria and socio-economic implications governing any major structural project.

4. Professional opportunities and job market

The high-level education offered by the PhD programme in Structural, Seismic and Geotechnical Engineering allows PhDs to continue their activity along three paths: (a) in the academic field; (b) within other public or private research institutions or companies with a focus on research and development, in the fields of Civil and Environmental Engineering and Industrial Engineering; (c) professional activities, typically as an independent self-employed professional, in a design office, engineering companies or as a high-level consultant, mainly as a structural analyst or in the field of advanced structural design and monitoring.

The inter-disciplinary approach of the PhD programme allows to exploit the experience gained during the study period in different areas: from the design of large infrastructures to the preservation and restoration of monumental and architectonical heritage, from seismic design to geostructure stability, not to mention the many issues in common with several branches of the Industrial Engineering (mechanical, aerospace, nuclear and bioengineering).

5. Enrolment

5.1 Admission requirements

Italian and International citizens can apply. They are requested to have graduated in accordance with the pre-existing laws D.M. 3.11.1999 n. 509, or to have a Master of Science degree in accordance with D.M. 3.11.1999 n. 509, or a Master of Science in accordance with D.M. 22.10.2004 n. 270, or similar
academic title obtained abroad, equivalent for duration and content to the Italian title, with an overall
duration of university studies of at least five years.
The certified knowledge of the English language is a requirement for admission. Please refer to the PhD
School website for details.
Admission to the programme follows the evaluation of the candidates' curricula, their motivation letter
and their report on the development of a hypothetical PhD research in one of the topics addressed in
the call for admission, to be submitted contextually with their application.

5.2 Admission deadlines and number of vacancies
The number of positions is indicated in the Call for admission to the 38th PhD cycle Programmes:
http://www.polimi.it/phd
Scholarships both on general and on specific themes are available, as stated in the call for admission.

6. Contents

6.1 Requirements for the PhD title achievement
The achievement of the PhD title in Structural, Seismic and Geotechnical Engineering requires a study
and research activity of at least the equivalent of three years of full-time study, research and
development of PhD thesis.
PhD candidates in Structural, Seismic and Geotechnical Engineering must earn a minimum of 25 course
credits (see paragraph 6.3 below), and to continuously conduct studies and research.
In addition, candidates should attend seminar activities organized by the Department, according to the
rules defined by the Faculty Board.
At the beginning of the course, the Faculty Board assigns a tutor to each PhD candidate to advise and
assist her/him along the overall training programme. The tutor shall be a professor belonging to the
Faculty Board. The tutors assist the candidates in the choice of courses to be included in the study plan,
which is eventually submitted for approval to the Coordinator of the PhD Programme (see also section
6.4 below).
The Faculty Board may assign extra course credits to one or more candidates, in case they need to
complete their preparation in specific topics, relevant for their research projects.

6.2 Research development
The main aim of all Politecnico di Milano PhD programmes is the development in the candidates of a
research-oriented mind-set, with expertise and skills in a specific research topic. To this end, candidates
develop a problem-solving capability in complex contexts, including the capacity of performing deep
problem analysis, identifying original solutions, and evaluating their applicability in practical contexts.
These skills provide the PhD candidates with major opportunities of development in their research both
in the academic field, and in public and private organisations.
PhD candidates are requested to develop an original research contribution. The PhD thesis must thus
contribute to increase the knowledge in the candidate's research field. Besides, it has to be consistent
with the research topics developed in the Department where the PhD Programme is carried out.
The original research results are collected in the PhD thesis, where the candidate's contribution is
framed in a perspective with respect to the state of the art in the specific research field.
The PhD research is developed under the guidance of a supervisor, who supports the candidate in the
definition of her/his objectives and in the everyday activities related to the thesis development. The supervisor is not necessarily a member of the Faculty Board and could belong to an institution different from the Politecnico di Milano. The supervisor can be supported by one or more co-supervisors. Further activities intended to develop the candidate's personal skills and research expertise are encouraged during the PhD path.
Candidates must acquire the capability to present and discuss their work within their research community. Consequently, both the participation to international conferences and the publication of research results in peer-reviewed journals are encouraged.
The PhD programme favours the candidates’ research interactions with other groups in their research community, preferably abroad. Research visits of at least three months are strongly encouraged, to help the candidates to acquire further skills for the development of their research work and thesis.
The duration of the programme is normally three years.

6.3 Objectives and general framework of the teaching activities
The PhD Programmes and the PhD School activate teaching forms of different kind, including courses, seminars, project workshops, laboratories. Teaching activities cover both basic research issues (problems, theories, methods) related to the PhD Programme, and specific research topics more directly connected with the students’ theses.
Lectures are usually held in English, except when indicated otherwise. The PhD programme includes at least one complete path delivered in English language.
Structured teaching activities allow earning ECTS credits. Other scientific activities, more specialised and difficult to evaluate, are taken into account by the Faculty Board for the overall evaluation, but do not allow earning ECTS.
The table below summarizes the candidate’s activity plan (coursework). At the same time, candidates should also focus on research under the direction of their supervisor as well as of the Faculty Board.

First/Second Year

Third year
In the third year, the candidate’s activity should be devoted entirely to research and to the development of the PhD thesis.

PHD SCHOOL COURSES
The PhD School of Politecnico di Milano offers a set of courses aiming to train the PhD candidates in soft and transferable skills. The skills and abilities provided by these courses are expected to help candidates across different areas of their careers in order to respond to the rapidly evolving needs of the global economy and society at large. The PhD School courses activated for the 2022-2023 Academic Year are summarized in the following table.

<table>
<thead>

</tr>
</tbody>
</table>
At least 10 of the 25 course credits that each candidate is required to earn shall be obtained through soft and transferable skills courses organized by the PhD School.

EVALUATIONS
After attending a course, PhD students should pass an exam, whose form (oral, written test or written essay) will be defined by the end of the course by the professor in charge of it.

COURSE PROGRAMMES

**OTHER PHD COURSES**

In addition and/or in alternative to those listed in Table A, students may attend PhD courses offered by other PhD programmes of Politecnico and/or by external institutions, such as CISM (www.cism.it) or Rose School (www.roseschool.it). In this case, the prior approval of both the tutor and the Coordinator is mandatory.

**Minimum requirements**

1) The minimum number of credits to be acquired from the list in Table A of Courses Characterising the PhD Programme or from Other PhD Courses is 15. Master courses activated at the Politecnico di Milano can be assimilated to PhD courses as long as they belong to scientific areas not fully covered by the courses offered by the PhD Program in Structural, Seismic and Geotechnical Engineering. In this case, the proposed course must be approved by the teaching board.

2) The minimum number of credits to be acquired from the list of PhD School Courses is 10.

3) The minimum number of credits to be acquired in the first year is 15.

**PREPARATORY COURSES** (only if foreseen)

If the supervisor and the tutor find it useful or necessary that the candidate attends preparatory courses (chosen among the activated courses at the Politecnico di Milano), the Faculty Board of the PhD programme may assign some extra-credits to be acquired to complete the training path. Credits acquired in this way will be considered as additional to the mandatory credits specified above.

**SPECIALISTIC COURSES, LONG-TRAINING SEMINARS**

Attending special courses and summer schools is strongly encouraged. In case they are certified and evaluated, attendance may allow students to obtain credits, as established by the Faculty Board and with prior approval of the study plan. Courses with certified attendance can be added to the study plan as optional “extra teaching activities”, even if they are not evaluated and therefore cannot be qualified as credits.

Other courses may be activated during the year. In this case, the candidates will be promptly informed and will be allowed to insert these new courses in their study plan.
6.4 Presentation of the study plan

PhD candidates must submit a study plan, which may be revised periodically (approximately every three months) to add new courses or to reflect developments in their PhD career. The study plans must be approved by the PhD programme Coordinator, following the procedure established by the Faculty Board.

6.5 Yearly evaluations

Candidates present their work to the Faculty Board at least once a year. The candidates must pass an annual evaluation in order to be admitted to the following PhD year. The third year evaluation establishes the candidate's admission to the final PhD defence.

As a result of each annual evaluation, the candidates passing the exam receive an evaluation (A/B/C/D) and may proceed with the enrolment at the following year. Candidates who do not pass the exam are qualified either as “Repeating candidate” (Er) or “not able to carry on with the PhD (Ei)”. In the former case (Er), the candidates are allowed to repeat the PhD year at most once. The PhD scholarships – if any – are suspended during the repetition year. In the latter case (Ei), the candidates are excluded from the PhD programme and lose their scholarships – if any.

In case the Faculty Board holds appropriate to assign directly an exclusion evaluation (Ei) without a previous repetition year, the request must be properly motivated and validated by the PhD School.

After the final year, candidates who have achieved sufficient results but need more time to conclude their research work and write their theses may obtain the admission to a further year.

Candidates will be given guidelines to prepare their presentations for the yearly evaluations and the admission to the final exam.

6.6 PhD thesis preparation

The main objective of the PhD career is the development of an original research contribution, consistent with the research objectives of the Department where the PhD programme is developed. The PhD thesis is expected to contribute to the advancement of the knowledge in the candidate's research field. Originality of her/his work and its role for the improvement of the state-of-the-art should be highlighted in the candidate’s thesis.

At the conclusion of the PhD studies, the Faculty Board evaluates the candidates. Candidates who receive a positive evaluation submit their theses to two external reviewers for refereeing. If the evaluation provided by the reviewers is positive (or after the revisions required by the external reviewers), the candidates defend their thesis in a final exam, in front of a Committee composed of at least three members (at least two of them must be external experts).

7. Laboratories, PhD Secretary Services

7.1 Experimental facilities

Advanced experimental research activities related to structures, materials and geotechnics are mostly supported by the Testing Lab for Materials, Buildings and Civil Structures (see website:
http://www.lpm.polimi.it/), which is an officially accredited Lab to test structures and structural elements with forces ranging from 0.01 to 5000 kN, as well as to carry out physical/mechanical tests on structural and geomaterials, both in standard and high-temperature conditions. Experimental facilities are also available on the Lecco Campus, and they are mainly devoted to the investigation of impact loads and advanced cementitious composites. PhD students are strongly encouraged to perform experimental activities: the visits to the lab and the scheduled courses on Experimental Structural Mechanics serve this purpose.

7.2 Computational resources
PhD students have a personal computer for their own use. For computing applications, a number of high-performance servers dedicated to PhD students is available. It is also worth mentioning that Politecnico di Milano is partner of the consortium CINECA (www.cineca.it), which hosts one of the most powerful supercomputers in the world.

7.3 PhD Secretary Services
Elena Raguzzoni
Department of Civil and Environmental Engineering
Tel: +39 02 2399.6504
e-mail: elena.raguzzoni@polimi.it

8. Internationalisation and inter-sectoriality
Carrying out study and research activities at external laboratories is strongly recommended. The Politecnico di Milano supports joint PhD paths with International Institutions, as well as Joint and Double PhD programmes. Further information is available on the PhD School website and on the PhD programme website.

More specifically, the PhD programme in Structural, Seismic and Geotechnical Engineering has established agreements of Double/Joint PhD Degree with the following institutions:

**Université Paris-Saclay, Paris – France**
Double PhD Degree

**University Amrita Vishwa Vidyapeetham (AMRITA) – India**
Double and Joint PhD Degree

**Budapest University of Technology and Economics (BUTE) – Hungary**
Joint PhD Degree.

**Ghent University**
Joint PhD Degree

**University of Iceland**
Joint PhD Degree
Scientific collaborations are also active with:

**Joint Research Centre, Ispra – Italy**
The PhD programme in Structural, Seismic and Geotechnical Engineering works together with the Ispra Joint Research Centre and, in particular, with the ELSA Lab (European Laboratory for Structural Assessment). Several PhD students have taken part to experimental activities within international research projects for thesis-related purposes.

**Universitat Politecnica de Catalunya, Barcelona – Spain**
Numerous joint research activities together with the UPC have been successfully carried out in the past years, especially in the geotechnical sector. Exchanges of PhD students and researchers have contributed to foster both PhD and research activities.

**Université Grenoble Alpes – France**
The collaboration between this university and the PhD programme in Structural, Seismic and Geotechnical Engineering started several years ago and has led to a rising number of visits, exchanges and collaborations on joint research projects. Remarkable is the relation with the Institut des Sciences de la Terre and the Laboratoire 3SR Sols, Solides et Structures, Risques.

**Delft University of Technology – The Netherlands**
The collaboration with the Delft University of Technology focuses on computational mechanics and the physic, numerical and theoretical modelling of the behaviour of porous materials. A member of PhD Faculty Board has spent her sabbatical in Delft, where she has worked on the generation of fractures in porous materials, their hydro-mechanical characterization and flooding risks.

Interaction with and exposure to the non-academic sector is beneficial for doctoral candidates as well as for research and innovation-intensive employment sectors. Involvement in the challenges and opportunities of the non-academic sector of the economy and society is fostered by networking, connectivity, inter-sectorial mobility and wide access to knowledge.

In particular, the PhD programme in Structural, Seismic and Geotechnical Engineering collaborates with the following research agencies and industrial partners: STMicroelectronics; Tetra Pak Packaging Solutions; Italcementi; Lombardi Italia; Arup.

*STMicroelectronics*, which is currently financing two scholarships within the PhD programme, is a joint Italian-French multinational company with more than 50,000 employees. Since 2000 STMicroelectronics Italia has been researching and implementing the industrial production of Micro Electro Mechanical Systems (MEMS), thanks to its strong focus on R&D. The collaboration with STMicroelectronics Italia mainly focuses on the following themes: MEMS mechanical reliability; mechanical characterization on the micro-scale; study and modelling of accidental impact; study of dissipative phenomena; study of stiction-related problems; study and planning of resonant machines and magnetometers; study of energy harvester systems; study of innovative micro-systems for the measurement of angular velocity (micro-gyroscopes); piezoelectric MEMS.

*Tetra Pak Packaging Solutions* is part of the Tetra Laval Group, founded in 1951 in Sweden, which
provides innovative processing and packaging solutions for food.
*Italcementi*, founded in 1864 and now owned by the German Heidelberg Cement, is the number 1 in aggregates production, the number 2 in cement and number 3 in ready-mixed concrete worldwide.
*Lombardi Italia*, founded in 1955 as consulting company for engineering services, cares for the life cycle of transport infrastructures and hydraulic works from the initial design phases to their operation.
*Arup* is an independent firm of designers, planners, engineers, technical specialists and consultants, which has been offering multidisciplinary professional services since 1946 and is now spread all over the world.
*Innovhub*, is a company conducting research activities, technical and scientific consulting and industrial testing in the field of paperboard, combustibles, oil and grease and silk. Joint research activities are in progress, with special reference to paperboard. A PhD scholarship has been partially sponsored by Innovhub to carry out research on the nonlinear behavior of paperboard during creasing and folding.
Attachment A1 – PhD Programme Coordinator

Prof. STEFANO MARIANI

EDUCATION AND ACADEMIC DEGREES
1995: "Laurea" (Master degree) with honours “cum laude” in Civil (Structural) Engineering at the Politecnico di Milano.
1999: Doctorate in Structural Engineering at the Politecnico di Milano.

EMPLOYMENT HISTORY
1999: Research Assistant at the Politecnico di Milano
2002: Assistant Professor in Structural Mechanics at the Politecnico di Milano.
2011: Associate Professor in Structural Mechanics at the Politecnico di Milano.

HONOURS
1996: Associazione Carlo Maddalena – Milano for young graduate students

MEMBERSHIP IN EDITORIAL BOARDS OF INTERNATIONAL JOURNALS
Member of the Editorial Boards of a number of international journals, among which: Algorithms; International Journal on Advances in Systems and Measurements; Inventions; Machines; Materials; Micro and Nanosystems; Micromachines; Sensors.

CHAIRMANSHIP OF INTERNATIONAL CONFERENCES

AREAS OF SCIENTIFIC ACTIVITY
The research activity has been mainly carried out in the fields of: ductile fracture; damage and fracture in quasi-brittle materials; parameter identification via Kalman filtering; reliability analysis of MEMS (Micro-Electro-Mechanical-Systems); data-driven structural health monitoring.

PUBLICATIONS
Around 280 papers in international peer reviewed journals and conferences.
